FOREWORD

The New York State Public Service Commission ("NYSPSC)", while streamlining the former annual reporting of five-year plans, ordered gas utilities to provide the Commission with a three-year research, development and demonstration ("RD&D") forecast in Case 98-G-1304. The first report was filed on April 1, 2001, with the forecast to be updated every three years thereafter.

Accordingly, the material included in this document has been prepared by National Fuel Gas Distribution Corporation ("NFGDC" or the "Company") to comply with the above order, and is to be considered as an update of the three-year forecast submitted to the Commission on March 31, 2022. This forecast covers the period October 1, 2021 through September 30, 2024.

I. Introduction

NFGDC, a wholly-owned subsidiary of National Fuel Gas Company, sells or transports natural gas to approximately 750,000 customers in western New York and northwest Pennsylvania. The Company's service territory includes the cities of Buffalo, Niagara Falls and Jamestown in New York, and Erie and Sharon in Pennsylvania.

The Company's Research, Development and Demonstration ("RD&D") Program detailed in this RD&D forecast is based on the goals and objectives of NFGDC. NFGDC continues to remain focused on customer service and the safe and efficient delivery of natural gas, while continuing to explore energy efficient and low emissions natural gas technologies. The RD&D Program funds the development, field testing, and demonstration of technologies, with the prospect of improving utility operations and increasing customers' choices of technologies. This may result in reduced costs, increased work management, greater reliability, reduced emissions, etc., for NFGDC's customers.

II. RD&D Program Overview

A. Goals and Objectives

The goals of the RD&D Program are to identify emerging technologies of benefit to NFGDC and its customers, fund developments through co-funded gas industry RD&D organizations and manufacturers, demonstrate appropriate technologies in the Company's service territory, and disseminate information to customers who could potentially benefit from the technologies. For technology demonstration projects, NFGDC seeks to have the technologies located at host sites with vested interests in the success of the technologies.

NFGDC does not internally conduct research and development. However, the Company does provide funding for external RD&D initiatives in concert with other gas industry, manufacturing, energy/environmental authorities, and other participants.

The primary purpose of the RD&D Program is the identification, development, introduction and demonstration of new technologies, equipment and processes which feature increased efficiency and improved performance (either in the residential, commercial and industrial end use market segments or in distribution operations). The main emphasis of the RD&D Program is on:

- Providing customers with a greater selection of energy-efficient, low-emissions technologies
- Remaining competitive with other energy technologies, while continuing to measure and advocate the positive environmental attributes of natural gas
- Reduction of fixed operating costs
- Improved gas load factors for greater seasonal utilization of gas facilities
- Increased safety and efficiency in delivering natural gas
- Increased customer benefits

B. Program Areas

NFGDC's RD&D Program in New York State consists of the *Traditional RD&D Program* funded through base rates and the *Millennium Funds RD&D Program* which is funded by a surcharge included in the Delivery Adjustment Charge, and is collected from New York ratepayers.

1. TRADITIONAL RD&D PROGRAM

The expenses of the Traditional RD&D Program are shared between New York and Pennsylvania to encompass NFGDC's service territory in both jurisdictions. The costs are allocated based upon Section D of this report. The Traditional RD&D Program addresses technology segments for residential, commercial and industrial end-use markets, and for Company operations technologies.

Internal RD&D – Internal RD&D Program addresses technologies nearing commercialization and consists of conducting technology demonstration projects, technology assessments, and technology transfer. Demonstration projects are initiated, implemented, and managed by NFGDC personnel. Technologies

demonstrated include new/emerging natural gas equipment, or other technologies not in significant use in the Company's service territory. These internal activities are supplemented by external research. External contract research is selectively funded under the Traditional RD&D Program, generally through leveraged Northeast Gas Association Research Committee ("NYSEARCH") activities.

a. Project Types

The Internal RD&D Program is divided into the following 3 areas:

- End Use Projects in the residential, commercial and industrial market segments, featuring new and emerging technologies.
- Operations Projects pertaining to NFGDC's gas infrastructure, including: reliability, work management, safety and the environment. Since the advent of Millennium Funds, that program has been funding the bulk of the qualified Operations projects.
- Other Funding set aside to cover technology assessment, technology transfer and general administrative expenses of the RD&D Program.

As part of the Internal RD&D technology transfer function, support is provided to the:

 Energy Solutions Center ("ESC") – This organization consists of gas industry technical/marketing professionals and energy equipment manufacturers. The ESC gathers information on new efficient gas equipment performance and benefits and works with manufacturers to make the market aware of offerings. The ESC coordinates a number of equipment and industry consortia on behalf of the gas industry.

b. Project Management

The RD&D Program is managed through the Energy Services Department. The designated project manager, who may possess specific skills or interests in the technology, manages traditional internal projects.

Projects may originate from various internal and external sources and may consist of domestic or international technologies. Upon identifying a technology worthy of supporting, its potential benefits are evaluated. The impact of technologies can vary widely depending upon differing regional needs. Information is gathered and presented for approvals. Before funds and other resources are committed, approvals are received with permission to charge expenses. An example of the RD&D project approval form used for this purpose is provided in Appendix A. Each approved project is planned to include scope, budget, schedule and goals. At the completion of the project, the results are gathered and reported.

External RD&D – The internal activities are supplemented by external research. This consists of projects and programs funded under the Traditional RD&D Program. These external projects are managed by professional organizations experienced in RD&D and in the commercialization of natural gas and/or energy technologies.

The External RD&D Program supports funding for the following organizations:

- New York State Energy Research and Development Authority ("NYSERDA") - NFGDC is a source of funding to NYSERDA through a mandatory assessment. The NYSERDA assessment is the largest single component of the Company's Traditional RD&D Program
- NYSEARCH NFGDC funds end-use and/or operations projects, on a voluntary basis, by participating in NYSEARCH. NFGDC selectively initiates or contributes to technology development projects managed by NYSEARCH, and receives project reports and other information. NYSEARCH leverages the resources of its membership, by contracting for applied research to be performed by qualified organizations.

Descriptions of projects in the Traditional RD&D Program are contained in the Project Summaries section of this report (Appendix B).

2. MILLENNIUM FUNDS RD&D PROGRAM

a. **Background -** The Millennium Funds RD&D Program at NFGDC was established during the transition from the mandatory Gas Research Institute ("GRI") Program under Federal Energy Regulatory Commission ("FERC") jurisdiction, which began in 2000. (1) As GRI funding was reduced over a five-year period to zero, the NYSPSC allowed for collections (up to the difference of the previous New York State share of federal assessments) to fund RD&D in New York State. The initial NYSPSC Order essentially limited expenditures to Company operations technologies, with opportunities to petition for special consideration of natural gas appliance and/or supply and storage research. A subsequent NYSPSC Order allowed funding for natural gas appliance application research and approved end-use energy efficiency programs. (2)

Footnotes:

- 1. PSC Order establishing the Millennium Funds Program, Case 99-G-1369.
- 2. PSC Order allowing end-use energy efficiency programs, Case No. 04-G-1047, and Joint Proposal dated July 22, 2005.

- b. **Supported Programs -** Millennium funding is provided to NYSEARCH on a project-by-project basis, to arrange for research on behalf of the New York State gas industry. NYSEARCH efforts allow for funding to be leveraged with other participants, which further allows the industry to undertake new technology developments that could not be individually undertaken alone.
- c. North American Heat Pump Collaborative Millennium funding is provided to a membership-based collaborative to accelerate the commercialization and market acceptance of gas heat pumps in North America. The goal of the collaborative is to enhance market share of gas heat pump technologies and energy efficient gas technologies.

Millennium funding is also used to support the following programs offered through the Gas Technology Institute ("GTI"):

- Utilization Technology Development ("UTD") UTD is involved in the research and development of natural gas utilization, including: residential and commercial appliances, industrial process, distributed generation, and natural gas vehicles. The program strives to meet critical energy demands in the United States by providing efficient, safe, economical and environmentally acceptable uses of natural gas to the benefit of the public.
- Emerging Technology Program ("ETP") NFGDC funding for this program is included within UTD. ETP is a new initiative by GTI, created in 2012, to address issues related to better moving technologies from development to commercialization. In spite of many attractive technology developments after gas industry RD&D restructuring, much of the former effective infrastructure and staffing (in moving those technologies to market) no longer exist. ETP is an effort to attempt to re-establish that necessary function.
- Operations Technology Development ("OTD") OTD develops, tests, and implements new technologies, to provide solutions relating to gas operations and its infrastructure. It is designed to provide new tools, equipment, software, processes, or procedures that will enhance safety, increase operating efficiency, reduce operating costs, and help maintain system reliability and integrity. The scope of the program includes near-term to mid-term developments.
- Sustaining Membership Program ("SMP") NFGDC funding for this
 program is included within OTD. The SMP strives to develop new and
 innovative technology concepts, which aim to address current needs,
 and may potentially reduce the cost of transmission, distribution and
 environmental operations for member companies. The SMP
 addresses mid-term to long-term developments.

 Low-Carbon Resources Initiative ("LCRI") – LCRI is an effort lead by the Electric Power Research Institute (EPRI) and the Gas Technology Institute (GTI) to collaborate on addressing the need to accelerate development and demonstration of low carbon energy technologies.

In addition, funding is provided by the RD&D Program to GTI, for Special Projects. NFGDC also reimburses for field support, testing and demonstration of new Company operations technologies, provided as "inkind" services to NYSEARCH.

Working with these organizations gives the Company access to newly emerging technologies, which may be incorporated into the technology assessment and/or the technology demonstration elements of the Traditional RD&D Program.

Funding levels for the above programs, including funding levels by project, appear in Appendices D, E, F and G of this report.

C. Program Management

The Energy Services Department is responsible for the overall administration of NFGDC's RD&D Program, managing the end-use demonstration projects of the Traditional RD&D Program, and managing the end-use RD&D activities within the Millennium Funds RD&D Program. The Mechanical Department is responsible for managing the Company's operations projects within the Traditional RD&D Program, and within the Millennium Funds RD&D Program.

The Energy Services Department and the Mechanical Department use existing department personnel to manage RD&D projects, but occasionally use personnel "on loan" from other departments as project managers, as needed. From time to time, NFGDC may also assign personnel to an external project of NYSEARCH or GTI, where some special interest and expertise exists within the Company.

The following individuals are assigned to managing Internal RD&D projects on a part-time basis:

Erik M. Solomon Area Manager, Energy Services Department

• Dale J. Halvarson Superintendent, Operations Department

Robert D. Plewa Jr. Superintendent, Mechanical Department

The following personnel also serve on the indicated gas industry External RD&D committees and boards:

Erik M. Solomon Utilization Technology Development (UTD);

Program Technical Project Committee (TPC); Emerging Technology Program (ETP); and Energy Solutions Center Board of Directors.

Dale J. Halvarson Operations Technology Development (OTD)

Program, including the Sustaining Membership

Program.

Robert D. Plewa Jr.
 NYSEARCH Research Committee.

Robert D. Eck Utilization Technology Development (UTD) Board

of Directors.

of Directors

Involvement in these committees and boards provides input on direction, and forums to make suggestions on the development of beneficial new technologies. It further allows for early assessments of the impact of emerging technologies on the Company's market.

D. Program Cost Allocations and Expenditures

Total RD&D expenditures for both the Traditional RD&D Program and the Millennium Funds RD&D Program are collected in undistributed ledger accounts. NFGDC functionally treats the Traditional RD&D Program as a company-wide program, without regard to state. However, expenses are shared through the allocation percentages shown below. The allocations between New York and Pennsylvania are calculated based upon the relative percentages of throughput (measured in Mcf) for each category. The allocations are determined using the forecasted throughput information for fiscal year 2022. These allocations may change slightly from year to year, as throughput proportions change.

Accounts are in place, as shown below, to track costs for Traditional RD&D Program internal costs, Traditional RD&D Program external costs, and for Millennium Funds RD&D Programs. Expenditures for fiscal year 2022 will be allocated as follows:

I. Traditional RD&D Programs

			· ·		
	Α	Internal			
		<u>Account</u> 188001	<u>Program</u> Residential	<u>% NY</u> 73	<u>% PA</u> 27
		188002	Commercial	72	28

B. Operations

- Renewable Natural Gas ("RNG")
- Mobile Vacuum Trailer Demonstration

PROJECT SUMMARY

Project Name: Zero Net Energy ("ZNE") Home Demonstration Project

Project Type: Residential End Use

Objective: This project is designed to demonstrate the benefits of using high-

efficiency natural gas equipment (heating, water heating, etc.) in conjunction with solar photovoltaic ("PV") panels to reach a ZNE or "near-ZNE" rating, yield lower equipment first costs, and lower operating costs vs. similar all-electric options. A ZNE rating would be achieved by generating more electric power from the PV panels than the combined use of natural gas and electricity in the home

over the course of 12 months.

Description: The demonstration project includes a partnership with Niagara

Habitat for Humanity to cover the cost of energy analysis and optimizing building design, cover incremental building costs to meet ZNE or "near-ZNE" ratings, and provide for on-going

monitoring of home performance (on a rehabilitation of an existing home and a new build in Niagara Falls, New York). A contract was executed with C.J. Brown Energy & Engineering, P.C. to administer the project, including energy analysis, optimizing the building design, and monitoring the performance of the homes

with respect to a ZNE rating over a 5 year period.

Expected Benefits: This project hopes to demonstrate the ability to reach a ZNE

rating, using energy efficient building practices along with high efficiency natural gas appliances, while identifying the incremental costs associated with designing and meeting ZNE ratings in an

existing home.

Project Schedule: The demonstration projects are currently expected to be

completed in 2020, at which point continuation of monitoring

performance will continue for 5 years.

Project Expenses: FY 22

22

Y 23

Project Status: On-going

Project Manager: Erik M. Solomon

PROJECT SUMMARY

Project Name: MyHEAT Imagery Inc.

Project Type: Residential End Use

Objective: The objective of the project is to reduce energy demand among

residential customers through behavioral and data-driven approaches. The project will collect aerial thermal data for the selected geographic area, processing thermal data and merging with ancillary datasets. Design of a personalized engagement campaign that will allow for robust evaluation. Lastly, provide project evaluations and verification of measured savings.

Description: A flyover of the specified geographic area(s) will be completed to

collect the thermal data required to generate HEAT Maps and HEAT Ratings. Additional geospatial datasets, such as building shapes and customer address details, will also be compiled at this time. After combining relevant data from National Fuel and other external sources with the collected thermal data, MyHEAT will generate HEAT Maps and HEAT Ratings. Simultaneously,

MyHEAT will work with National Fuel to design a unique customerfacing platform. Further, the project will identify target customers for engagement based on several factors including HEAT Ratings, consumption, and potentially stage of participation in efficiency

programs.

Expected Benefits: MyHEAT will implement an engagement campaign that will

periodically engage customers through the program by mail and email. Following the completion of the engagement campaign, the evaluation team will analyze consumption data pre- and post-intervention. The outcome will be a comparison of the reduction in consumption from customers receiving heat loss details to the

control group.

Project Schedule: The project began in 2020, at which point continuation of future

phases will be monitored.

Project Expenses: FY 22

FY 22

FY 23

FY 24

Project Status: On-going

Project Manager: Ashley Butera

PROJECT SUMMARY

Project Name: Hybrid Heating System Demonstrations

Project Type: Residential End Use

Objective: The purpose of the hybrid gas and electric air source heat pump

(ASHP) project is to analyze the performance data of installation

packages that consist of a high efficiency electric ASHP in

combination with a high efficiency gas furnace and tankless water heater. The ASHP supplies heat when the outside ambient temperature is above a set point temperature, and when the outside ambient temperature falls below the set point temperature

the high efficiency natural gas furnace supplies heat.

Description: NFG is conducting a study to determine the monthly energy cost

and usage changes, as well as the associated GHG emissions, associated with utilizing an ASHP in combination with a high efficiency furnace for heating (and cooling), as compared to a

traditional furnace only and central A/C.

Expected Benefits: The result is to determine a cost-effective option to lower overall

customer emissions. National Fuel will use this data to improve our existing enhanced rebate on a high efficiency furnace which is combined with an electric air source heat pump (ASHP) through

our Conservation Incentive Program.

Project Schedule: The hybrid systems were installed throughout the 2020-2021 and

2021-2022 heating season, at which point continuation of

monitoring performance will continue for 3 years.

Project Expenses: FY 22 FY 23 FY 2

Project Status: On-going

Project Manager: Ashley Butera

PROJECT SUMMARY

GTI Hybrid Heating System Controls Pilot Project Name:

Project Type: Residential End Use

Objective: Demonstrate the Gas Technology Institutes' (GTI) Smart Hybrid

> Controller + Storage solution on several hybrid HVAC systems in National Fuel's service territory. The proposed demonstration may

include a storage / backup technology for resilience.

Description: NFG and GTI will install the Smart Hybrid Controller & Storage

solution on new customer hybrid heating demonstrations or leverage our existing demonstrations of hybrid heating systems deployed in NY. GTI will conduct a study to determine the monthly energy cost and usage changes, as well as the GHG emissions, associated with a utilizing the Smart Hybrid Controller

& Storage, as compared to our existing hybrid heating

installations.

Expected Benefits: The result is to determine a cost-effective option to lower overall

> customer emissions by installing a smart device to lower emissions associated with the source of energy utilized by the

appliance.

Project Schedule: The demonstrations are planned to begin in the Fall/Winter of

2022.

Project Expenses: FY 22

Project Status: Planning

Erik M. Solomon Project Manager:

PROJECT SUMMARY

Project Name: BlocPower Hybrid Heating Pilot

Project Type: Residential End Use

Objective: The purpose of the BlocPower Hybrid Heating Pilot is to provide a

low carbon solution prioritizing low and moderate-income

communities. The focus is on natural gas and electric hybrid heat pump solutions that shift some heating to electric air source heat

pumps while leveraging natural gas furnaces in very cold

conditions.

Description: NFG and BlocPower are planning a 24-month program to provide

hybrid heating solutions to low-rise multifamily and small commercial buildings in low to moderate income communities. The program includes sales, marketing, market research, incentives, and program management in our service territory. Along with the management and incentives, the program would

support training for community-based contractors.

Expected Benefits: The result is to determine a cost-effective option to lower overall

customer emissions within the low- and moderate-income communities. National Fuel and BlocPower will use this data to determine the appropriate incentives and financing necessary to

increase hybrid heating installations.

Project Schedule: The program is planned to begin in the Fall of 2022 and run for 24

months.

Project Expenses: FY 22 FY 23 FY 24

Project Status: Planning

Project Manager: Erik M. Solomon

PROJECT SUMMARY

Project Name: Compressed Natural Gas ("CNG") Demonstration Vehicle

Project Type: Commercial End Use

Objective: The project provides first-hand experience with the day-to-day

operation of a typical CNG bi-fuel passenger vehicle, the 2015 CNG Chevy Impala. Project objectives include tracking and documentation of vehicle performance, fuel costs, user fueling habits, and maintenance issues. Additionally, the vehicle will be made available for hands-on demonstration at trade shows and expost hroughout the region, and to specific fleet managers

interested in clean, alternative fuel options.

Description: The 2015 Chevy Impala is equipped with a bi-fuel CNG/gasoline

system. The vehicle was purchased at the end of fiscal year 2015 and is currently being utilized by NFGDC personnel. The bi-fuel option allows the vehicle to run on either CNG or gasoline, while seamlessly switching between fuel types. This option helps to alleviate concerns over the relative scarcity of CNG fueling stations (a barrier to potential adoption), by allowing the vehicle to run on gasoline when CNG is not readily available. Custom graphics have been added to the vehicle to help promote CNG, as the vehicle itself is otherwise indistinguishable from a gasoline only Impala. Vehicle mileage, fuel use, and maintenance issues

are being tracked via NFGDC's fleet tracking system.

Expected Benefits: This project will gather real-world information and experiences

related to owning and operating a bi-fuel CNG passenger vehicle. This information, along with the ability to provide hands-on demonstrations to fleet managers and other interested parties, should help increase market knowledge, and the potential adoption of CNG as a clean, cost-effective transportation fuel.

Project Schedule: The vehicle was purchased in September 2015 and has been

used regularly since November 2015. The project is currently

expected to continue through at least 2023.

Project Expenses:

FY 24

Project Status: On-going

Project Manager: Erik M. Solomon

FY 22

PROJECT SUMMARY

Project Name: Botanical Gardens Geothermal Study

Project Type: Commercial End Use

Objective: The objective of this project is to perform a feasibility study to

evaluate the potential to deliver heating and colling energy utilizing a Geothermal Heat Pump (GHP) for the entire Buffalo Botanical

Gardens facility.

Description: ARUP will evaluate the existing buildings heating and cooling load

profile from existing building data. This data will be modeled along with the facility expansion data to facilitate a comprehensive geothermal analysis. After this is complete, a GHP concept

design will be developed.

Expected Benefits: The study will develop the preliminary design parameters,

assumptions and recommendations while identifying the key

design interfaces and constraints.

Project Schedule: The study plans to be completed in 2022.

Project Expenses: FY 22 FY 23 FY 24

Project Status: Planning

Project Manager: Erik M. Solomon

PROJECT SUMMARY

Project Name: Hydrogen Blending Demo

Project Type: Industrial

Objective: Demonstrate the feasibility of using various levels of hydrogen

blended with natural gas (HENG) downstream of NFG's meter while observing the impact on downstream natural gas equipment

and emissions data.

Description: This demonstration will include the blending of hydrogen with

natural gas with observations at the following percentages (by volume): 0%, 5%, 10%, 15%. The hydrogen provider is

constructing a mixing skid that will perform the gas blending downstream of the NFGDC meter. The customer's boiler will burn the HENG that will be delivered through isolated house lines. The

boiler burner will not be modified.

Expected Benefits: A final report summarizing the field observations at each HENG

percentage. The report will also include the boiler efficiency and

emissions impacts at each HENG percentage level.

Project Schedule: This project is currently expected to be completed between in the

Fall of 2022.

Project Expenses: FY 22 FY 23 FY 24

Project Status: On-going

Project Manager: Ken Lawton

PROJECT SUMMARY

Project Name: Renewable Natural Gas ("RNG")

Project Type: Operations

Objective: Demonstrate the feasibility of using biogas sourced from farm

waste (dairy farms), industrial process food waste, wastewater treatment facilities and/or municipal landfills to produce pipeline

quality natural gas for system supply.

Description: These projects require partnerships with RNG developers at

several potential RNG production locations. NFGDC plans to invest in the RNG testing equipment, to verify compliance with respect to the Company's gas quality standards and currently effective tariff. NFGDC also intends to fund a portion of the RNG

interconnection equipment costs.

Expected Benefits: Since RNG utilizes methane that otherwise would have been

released into the atmosphere naturally, the greenhouse gas emissions (on a life cycle basis) should be at or near zero.

Project Schedule: These projects are currently expected to be completed between

2021 and 2023.

Project Expenses: FY 22 FY 23 FY 24

Project Status: On-going

Project Manager: Erik M. Solomon

PROJECT SUMMARY

Project Name: Mobile Vacuum Trailer Demonstration

Project Type: Operations

Objective: Investigate the most inexpensive, safe, ergonomic, and efficient

way to perform a problem locates.

Description: NFG would like to explore use of a vacuum unit on wheels and an

air wand to consider and evaluate this as a more efficient way to perform problem locates vs our current method of hand-digging, and more cost-effective than Vac-trucks currently employed at larger Service Centers. It is possible to house these units on trailers in a simple, compact, and efficient manner while still meeting the needs of smaller and more remote Service Centers.

Expected Benefits: Reduce the potential for third party damage by more quickly

responding to problem locates and ultimately drive down the company damage rate. Make un-locatable facilities locatable by means of non-mechanical excavation which both reduces the risk of employee injury (less hand digging) and makes the process more efficient (one employee operation of unit rather than tie up two-person crew which are in high demand for other critical work).

Project Schedule: This project is expected to be completed in December 2023.

Project Status: On-going

Project Expenses:

Project Manager: William F. Snyder III

Appendix C

RD&D PROGRAM

Fiscal Year 2021 RD&D Budget and Actual Expenses Company Totals and New York Allocations

As mentioned previously, all expenditures for the Traditional RD&D Program are charged to undistributed accounts on the ledger. In this Appendix, the Company is reporting the total budget and total expenditures for the Total Company (i.e., both New York and Pennsylvania combined) as well as for New York only.

In the "End-Use" and "Operations" sections of the budget, project selections are based upon available opportunities and the potential of emerging technologies to address customer, market and company needs. The Traditional RD&D Program, for these two areas, is focused on the demonstration of new, or nearly commercialized products. These demonstrations aim to confirm performance, gauge manufacturer claims, and realize operation experience from a consumer perspective.

NEW YORK MILLENNIUM FUNDS RD&D PROGRAM

Project Commitments/Expenditures/Collections

The Millennium Funds RD&D Program is an umbrella program supporting other internal and external RD&D programs.

The Northeast Gas Association Research Committee ("NYSEARCH") administers the Millennium Program on behalf of New York State. NYSEARCH provides continual offerings of gas industry research, development and demonstration projects, from which National Fuel may select to support through funding. If and when a project is chosen for co-funding, a signed Memorandum of Commitment ("MOC") is executed between the Company and NYSEARCH. Payments are subsequently made to NYSEARCH, as projects progress.

Company support for Gas Technology Institute research continues, through the Utilization Technology Development, N.P. (UTD) and the Operations Technology Development, N.P. (OTD). Additionally, field operations support continues through the Millennium Funds RD&D Program.

Two additional sub-programs include the Emerging Technology Program (ETP) funded through UTD, and the Sustaining Membership Program (SMP) funded through OTD. Uses of funds external to NYSEARCH are reported back to them, for publishing in annual updates to their website. Additional detail is also included herein.

The table included in Appendix E includes information on total expenditures, and collections (refunds), since the inception of Millennium.

Appendices F and G provide details on project selections from 2021, for UTD and OTD, respectively.

NYSEARCH web address: http://www.nysearch.org

Notes:

1. **M-2005-013**. In 2005, NFGDC began participating in the new Utilization Technology Development (UTD) organization by sharing the annual costs with the Pennsylvania Delta Funds RD&D Program.

2. M-2003-011. In 2006, charges for participation in the Operations Technology Development (OTD) organization were reduced from to per year, as costs began to be shared with the Pennsylvania Delta Funds RD&D Program.

NATIONAL FUEL GAS DISTRIBUTION CORPORATION RESEARCH, DEVELOPMENT & DEMONSTRATION (RD&D) PROGRAM Millennium Funds RD&D Program as of December 31, 2021

UTILIZATION TECHNOLOGY DEVELOPMENT PROGRAM

Project Allocations - 2021

As part of the Millennium Funds RD&D Program (Project M-2005-013), NFGDC
participates in the Gas Technology Institute not-for-profit Utilization Technology
Development ("UTD") Program. The UTD conducts applied research, development and
technology demonstrations for customer end-use appliances and technologies. Annual
payments have historically amounted to . In 2015, UTD Board Members voted
to approve a dues increase, which resulted in this figure increasing to , in 2016
and later. Proposed projects are presented at an annual allocation meeting of the
membership, normally held in March/April of each year. NFGDC allocates dollar
amounts to individual projects of the Company's choosing. During this allocation
process (if projects are fully subscribed by others), then amounts may be either allocated
to other worthwhile projects or may not be allocated at all (contingent upon the
availability of future projects beneficial to NFGDC, its customers and potential end-users
of the technologies).

Final allocations to UTD, from 2021, illustrate the project selections and allocations by NFGDC. One benefit of the program is that all the members share in the results of all other member-supported projects, even if they did not allocate funds to those projects. There are projects of great interest to others, and to the Company, which may already have been fully subscribed.

- 1.14.K.2 Refund
- 1.14.K.3 Refund
- 1.15.C.3 Next Generation Residential Gas Clothes Dryers Phase 3: Full Prototype
- 1.16.H.3 EnergyPlus Models and Market Analysis for Advanced Resid. Heating Systems Phase 3
- 1.17.B.4 Thermoelectric Generator for Self-Powered Water Heater Phase 4
- 1.17.C Refund
- 1.18.F.3 Mitigating Methane Emissions from ResCom End Use Equipment Phase 3
- 1.19.C Integrated, Self-Powered, High-Efficiency Burner System
- 1.19.E.2 Sequestering Non-Condensable Gases for Enhanced Gas Abs. HP Reliability -
- 1.19.1.2 Comparative Assessment of Space Heating Systems in Virtual Test Home Phase 2
- 1.20.A Robur and SMTI Low-Capacity Gas Absorption Heat Pump Laboratory Evaluation
- 1.20.B Boostheat Thermal Compression-based Gas Heat Pump
- 1.20.E Gas-Fired Binary Fluid Ejector Heat Pump Water Heater
- 1.20.F Emerging Rescom Fuel Cells Laboratory Evaluations
- 1.20.G High-Efficiency Combi System Integrating PV and Self-Power
- 1.20.G.2 High-Efficiency Combi System Integrating PV and Self-Power Phase 2
- 1.20.H Hydrogen-Blended Gas in Residential/Commercial Combustion Equipment
- 1.20.H.2 Hydrogen-Blended Gas in Residential/Commercial Combustion Equipment Phase 2
- 1.20.I Membrane Based Ionic Liquid Absorption Heat Pump for Commercial HVAC
- 1.20.J Integrated CHP System for Multi-Family Buildings
- 1.20.J.2 Integrated CHP System for Multi-Family Buildings Phase 2
- 1.21.A HeatAmp Adsorption Thermal Heat Pump
- 1.21.B Technical Support for ResCom Gas Equipment Testing, Performance and Safety
- 1.21.C CleanO2 CARBINX Carbon Capture
- 1.21.E Gas Engine Heat Pump Modeling, Testing and Implementation
- 1.21.F Commercial Heat Pump Water Heater Field Performance Comparison
- 1.21.I Ionic Liquid Absorption Heat Pump for Commercial Water Heating
- 2.19.F CYSORE 24kW mCHP and Chiller System Lab Test

- 2.14.O.3 Gas Quality Sensor Validation Phase 3
- 2.17.A.3 Water Recovery From Humid Exhaust Gas Field Demonstration Phase 3
- 2.20.A Low Emission Efficient Burner for Ovens and Dryers Field Demonstration
- 2.20.B Sub-Dew Point Cooling Technology
- 2.20.C High Efficiency Low Emission Commercial Baking Oven Field Demonstration
- 2.20.E Energy Source Options for Industrial Users
- 2.20.E.2 Energy Source Options for Industrial Users Phase 2
- 2.21.A High Hydrogen Burner for Commercial and Industrial Applications
- 2.21.B Energy Recovery from Brewing/Distilling Operations: Field Demo
- 2.21.C Zero Emissions Processes with Carbon Recovery
- 2.21.D High Efficiency Crop Drying Process

Food Service

- 1.14.A.6 Next Generation of CFS Burners Phase 6
- 1.16.B.4 Refund
- 1.17.H.2 Residential Cooking Pollutants and IAQ Phase 2
- 1.17.H.3 Residential Cooking Pollutants and IAQ Phase 3
- 1.19.A.2 High Efficiency Smart Convection Oven Phase 2
- 1.19.B.2 Gas Fired Warewasher Phase 2
- 1.19.B.3 Gas Fired Warewasher Phase 3
- 1.20.K Field Evaluation of Indoor Air Quality in Residential Kitchens
- 1.21.G Technical Support to Address Gas Foodservice Technologies
- 1.21.H CFS Burner Technology Carbon Reduction Including Hydrogen Blending

Clean Transportation

- 2.19.G CNG Dispenser-Tank Communication
- 2.20.F Next Generation NGV Driver Information System
- 2.20.G Smart CNG Station Field Demonstration
- 2.21.F CNG Locomotive Field Demonstration
- 2.21.G Distributed RNG Production and Cleanup
- 2.21.H Improved Hydrogen Fueling for Heavy-Duty Vehicles
- 2.21.I Technical Support for Clean Transportation Testing, Performance and Safety

OPERATIONS TECHNOLOGY DEVELOPMENT PROGRAM

Project Allocations - 2021

As part of the Millennium Funds RD&D Program (Project M-2003-011), NFGDC participates in the Gas Technology Institute not-for-profit Operations Technology Development ("OTD") Program. The OTD conducts applied research, development and technology demonstrations for field operations, infrastructure and environmental technologies. Annual payments for the program amount to Proposed projects are presented at an annual allocation meeting of the membership, normally held in December of each year. NFGDC allocates dollar amounts to individual projects of the Company's choosing. During this allocation process (if projects are fully subscribed by others), then amounts may be either allocated to other worthwhile projects or may not be allocated at all (contingent upon the availability of future projects beneficial to NFGDC, its customers and potential end-users of the technologies).

Final allocations to OTD, from 2021, illustrate the project selections and allocations by NFGDC. One benefit of the program is that all the members share in the results of all other member-supported projects, even if they did not allocate funds to those projects. There are projects of great interest to others, and to the Company, which may already have been fully subscribed.

Payments to OTD, Fees, Carryover

Payments to OTD
Administration Fees
Carryover of Unallocated Funds from Prior Year
Funds Available for Allocation

Allocations to Projects

(1) Pipe and Leak Location

1.14.g.6 Residential Methane Detectors Program, Phase 6: Support for NFPA Standard Development

(2) Pipe Materials Repair and Rehabilitation

2.14.c.2 Assessment of Squeeze-off Location for Small Diameter Polyethylene (PE) Pipe and Tubing, Phase 2 - Refund

(5) Construction/Infrastructure Techniques

- 5.07.p (GTI) GNSS (GPS) Consortium
- 5.15.a.3 Cyber Security Working Group
- 5.16.f Improved Safe Excavation Productivity for Locating Buried Utilities Refund
- 5.17.k Protect Tracer Wires from Corrosion Best Practices and New Methods Refund
- 5.19.f Purging Gas Pipes into Service without Venting Gas to Atmosphere Refund
- 5.19.f.2 Purging Gas Pipes into Service without Venting Gas to Atmosphere PHASE 2
- 5.19.k.2 Utonomy Smart Regulator Phase 2
- 5.20.a Subsurface Multi-Utility Asset Location Detection
- 5.20.e Single-Path Ultrasonic Meter Long-Term Performance Testing and Monitoring
- 5.20.k Smart Shutoff Technology for Commercial and Residential Buildings
- 5.21.a Meter Removal Tool Commercialization Phase
- 5.21.e Evaluation of the CoSMiC Eye Satellite Based Pipeline Right-of-Way Monitoring System
- 5.21.g Remote Monitoring of Pipe-To-Soil Utilizing AMI
- 5.21.j Hydrogen Blending Impact on Aldyl-A nad HDPE Pipes
- 5.21.n Advanced Training Technologies Consortium 2021
- 5.21.q Development of a MDPE and HDPE Allowable Pull Load calculator
- 5.21.s Gap Identification Between Hydrogen and Natural Gas Pipeline Standards and Practices
- 5.21.t Effect of hydrogen blended natural gas on the performance of gas meters and diaphragm type service regulators- Phase 1

(6) Memberships/Other

6.08.a (GTI) Carbon Management Information Center

6.11.a PRCI Membership

6.a (GTI) SMP

(7) Methane Emissions/Detection and Gas Quality

7.10.b.3 - Odor Fade and Odor Masking from H2 Blends

7.16.e.3 - Biomethane On-Line Monitoring Phase III

7.18.h.2 - Gas Quality Resource Center (7.11.a and 7.18.h)

7.20.a - Develop Remote Sensing and Leak Detection Platform with Multiple Sensors

7.20.b - Validation of Remote Sensing Leak Detection Technologies under Realistic Conditions

7.21.f - Developing a Framework for Certifying Responsible Natural Gas

7.21.j - Assessing Performance Impacts and Leak Rates of System Components

(8) Intelligent Utilities

8.17.b.3 - Transmission Tracking and Traceability Marking Standard Pilot Projects

8.17.b.4 - T and T - GS1 barcode standardization, counterfit protection, and two way communication.

8.17.c.3 - GNSS Smart Automations (GSA) Phase 3

8.20.a - B31Q Training Documentation Portal

8.20.j - Above Ground Service Tee Identification and 3D Mapping

8.20.I - Enhanced Locating Technologies for Underground Pipelines with Better Accuracy

8.20.m - 3D Visualization Software for Mapping Underground Pipelines and Improving Pipeline Asset Management

8.21.g - GNSS Testing in an Urban Environment

8.21.h - Tracking Software Development for Pipeline Safety Management Systems
