

Important Safety Message: Natural Gas Generators at Home

While home standby natural gas generators may provide peace of mind and comfort, manufacturers of these products do not recommend their use by customers to supply power to critical life support equipment (LSE). It is dangerous and potentially deadly to operate LSE with a home backup generator. Customers with LSE that lose electric service should immediately call 911 in an emergency, or call their electric utility to advise of loss of service and receive further instruction.

If you or someone you know uses LSE at home, be sure to contact the electric utility provider to enroll in their Life Support Equipment program. While enrollment doesn't guarantee uninterrupted electric service, those programs provide information and notifications to help customers using LSE stay informed, prepared, and safe during an electrical outage.
