

National Fuel Gas Distribution Corporation
New York Division
Price to Compare to ESCOs

The gas supply charges portion of your bill includes the cost of the gas you purchase from National Fuel or, if you choose, from another approved natural gas supplier. The rates below represent National Fuel's total Natural Gas Supply Charge (NGS), which serves as the Company's monthly "price to compare" when evaluating offers from Energy Service Companies (ESCOs).

The NGS includes both the cost of natural gas and the upstream pipeline capacity necessary to ensure reliable delivery of gas to customers. Because National Fuel is a regulated utility, it does not profit from the sale of natural gas and cannot mark up the market cost of gas. The NGS also includes the Merchant Function Charge (MFC), which recovers administrative costs related to gas procurement. The rates shown below exclude sales tax and gross receipts tax.

Price to Compare = NGS (no taxes included)

NGS = Commodity + Pipeline Capacity + Merchant Function Charge
